

MS Access Exercise 4

Start with the database file from Exercise 1, 2 and 3, which contains four tables (CUSTOMERS, PRODUCTS, ORDERS, SHIPMENTS), two queries (NY Customers, Out Of Stock), three forms (New Customers, New Products, New Orders), and one report (NY Customers Report).

Create table: ORDERS-PRODUCTS

Create the field names and their properties as you need them to store your specific data for orders.

Orders-Products Table Field Name(s)

OID (Order ID) (FK)

PID (Product ID) (FK)

Quantity

Then relate the existing tables into a many-to-many relationship between ORDERS and PRODUCTS.
